

The Popular Code Editor | Project

Forced Bytes

The problem

What code editor to use ?

Choosing a Good editor for your codes is an important thing.

There are Lots of Editors Out there and choosing the right one for your projects is needed!

THE PROJECT STAGES

Poll

Creating the poll with google forms to get the database.

Exporting the database

Actually here comes the Csv file. These files are divided by commas.

So we need to export the poll csv data and import in into our code!

Coding the app

PYTHON :))))

We use the python programming language plus the sklearn or [scikit-learn](#) library.

Solution

After all stages you will get your right code editor! It is all about the poll's database and our experience.

Using Our non graphical app :|
WE WILL TALK ABOUT IT LATER

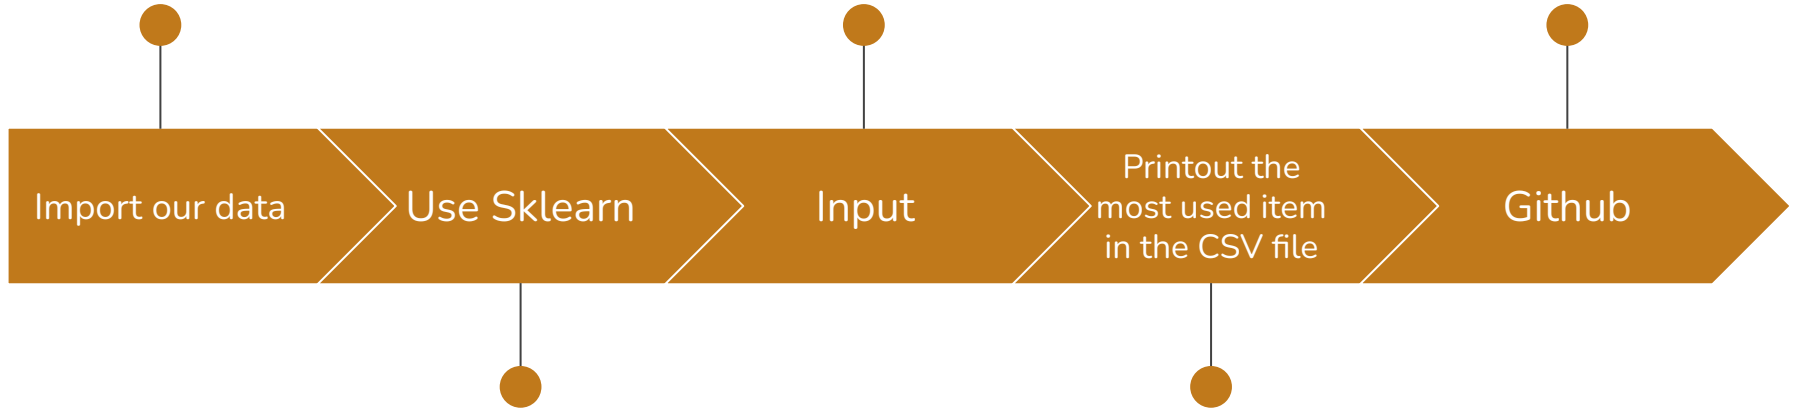

The image features a solid orange background. In the top-left corner, there are three vertical bars of varying heights, each composed of several overlapping semi-transparent circles. In the bottom-right corner, there are four vertical bars of increasing height from left to right, also composed of overlapping semi-transparent circles.

Python!

The CSV file we have
Exported!

Getting those inputs in
google form in python
again. And then right
Code Editor will be here!

Import into Github :)

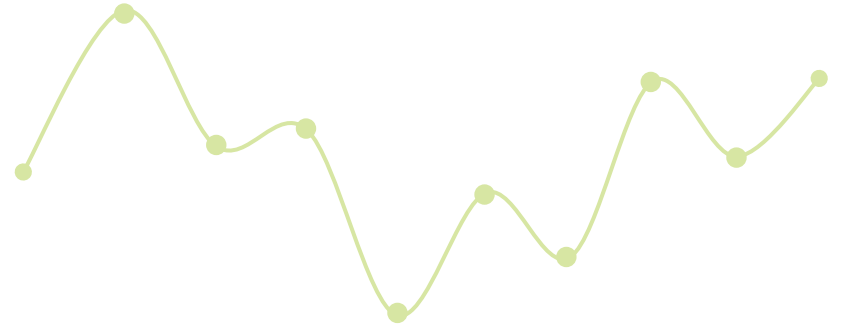

Read all lines and
find-out an algorithm

Using the Print Function to
Show you the Best Code
editor and a bit information
about it

OUR FINAL GOAL

*In the end we want to Create
A website and Fill it with Polles and
give people tips about what they are
using or other stuff that we haven't
thought about yet.*
